

NRC New Generation Nuclear Engineering Faculty Development Program

The proposed faculty development program would provide support in all relevant categories for junior faculty to build sustainable research and teaching programs. This includes money for equipment to build or update laboratories needed to ensure research methods are up to date. Funds are needed to support graduate students and lab supplies in the early development of a research program to be able to seek competitive awards. Similarly summer support of junior faculty is needed in the early years to initiate research and develop proposals for competitive funding. Finally travel funds are needed to gain exposure for the program, recruit students, and initiate collaborations
